

Unit 5- Extra Practice #3.

For each set of data:

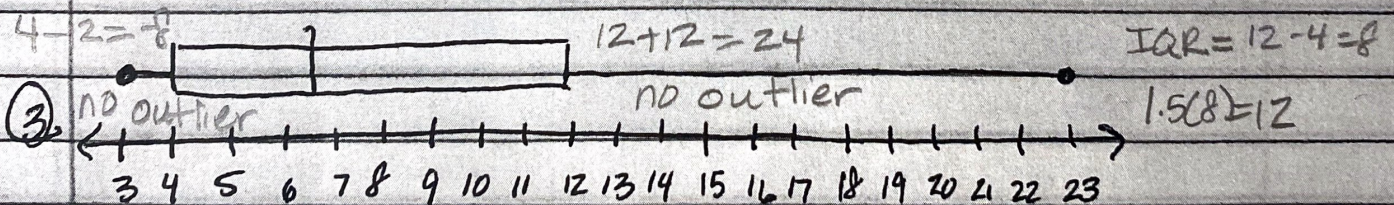

- 1) determine if there are any outliers & justify your answer mathematically, and
- 2) tell which measure of central tendency (mean or median) is the most appropriate measure of center. Explain your answer.

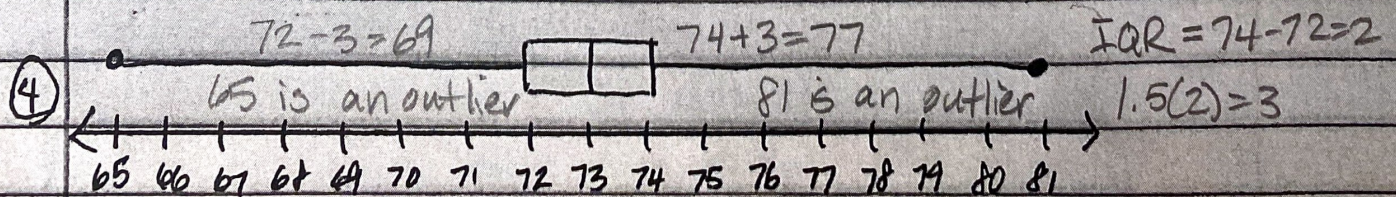

The data is skewed left, so ^{the} median must be used.

The data is skewed right, so the median must be used.

The data is skewed right, so ^{the} median must be used.

The data is symmetric, so either mean or median may be used.
